

SCHOOL LIFE SKILLS TALK

As part of our community outreach programs for 2010, **Asian LifeSkills** has taken the initiative to reach out to our youths. We have identified ‘**Climate Change & Green Technology**’ and ‘**English Skills**’ as topics that are important and relevant to youths today. We are currently working with institutions and schools like yours to provide complimentary preview talks on these 2 topics to get our youths aware and be active participants in the ‘Green Movement’ and also elevate their enjoyment of the English language.

Climate Change & Green Technology

- ✓ What is Climate Change & Green Technology?
- ✓ As sea-level rises on coastal and adjoining low lying areas, what is the impact to Singapore?
- ✓ How our youths as agents bring the change in our society?

English Skills

Learn & acquire English skills using role plays based on performing art.

- ✓ Students take samples out from their theoretical lessons and their daily life to form role-plays to use the language in a different expressive way.
- ✓ They will create a moving non conversational scene. This part focuses on the human body language which is often overlooked.

Benefit: learn to read and talk confidently in front of people and to develop their language in a way based on playing and fantasy training.

We recognize that every youth is unique and precious. In **Asian LifeSkills** we aspire towards supporting schools in nurturing and providing our youths with a balance and holistic learning journey.
